Experience

Golden Energy Mines | Jakarta

Technical Lead / Product Engineering Lead | 02/2022 - Present

Professional Summary

Technical Lead with experience leading cross-functional teams in developing enterprise-scale digital products and operational systems. Skilled in translating business requirements into integrated digital solutions, prioritizing product delivery, and collaborating with stakeholders to drive operational efficiency and business impact. Experienced in agile delivery, enterprise system modernization, and cloud-native environments.

Core Competencies

- Product Delivery Management
- Stakeholder Management
- Agile/Scrum Methodology
- Cross-Functional Team Leadership
- Product Requirement Gathering
- Feature Prioritization
- Enterprise System Modernization
- Data-Driven Decision Making
- Digital Product Development
- Cloud-Native System Architecture

Product Delivery & Engineering Leadership

- Led cross-functional engineering team of 8+ members across backend and DevOps initiatives.
- Provided architectural direction for reliable cloud-native services deployed on Google Kubernetes Engine (GKE).
- Reviewed and approved technical designs, deployment strategies, and release processes.
- Mentored engineers on clean architecture, CI/CD best practices, and system reliability.
- Designed enterprise-grade data architecture to support cross-system financial workflow integration and operational reporting needs.
- Worked with stakeholders to identify operational pain points and translate them into integrated digital solutions aligned with business objectives.
- Led integration initiatives between multiple enterprise systems to improve operational efficiency and data consistency across business workflows.
- Improved product delivery efficiency by implementing automated deployment pipelines and standardized release processes.
- Managed high-availability cloud-native infrastructure supporting reliable enterprise product delivery and system availability.
- Collaborated with operational and finance stakeholders to gather requirements, define priorities, and align product initiatives with business objectives.
- Contributed to product roadmap planning and feature prioritization for enterprise operational systems used by 60+ stakeholders.
- Supported enterprise operational systems used by 60+ internal stakeholders across operational and finance divisions.
- Worked closely with cross-functional teams to ensure timely delivery of digital solutions aligned with user and business needs.
- Reduced production incidents through implementation of monitoring, logging, and standardized deployment practices.

LNSW | Jakarta

Backend Developer (Contract – Ministry of Finance Project) | 08/2021 - 10/2021

Backend Engineering & API Development

- Designed and developed RESTful APIs using Node.js (ExpressJs) for Ministry of Finance Application
- Design and developed RESTful APIs using SOAP and XML
- Utilizing RabbitMQ as message broker for handling asynchronous communication in microservice
- Built modular and maintainable backend services following clean architecture principles.
- Implemented authentication & authorization mechanisms (JWT / role-based access).
- Designed and optimized MySQL database schemas for transactional systems.

- Collaborated with frontend, QA, and DevOps teams in Agile sprint cycles.
- Assisted in troubleshooting and resolving production issues.

Skills

Product Delivery, Product Requirement Gathering, Feature Prioritization, Stakeholder Management, Agile/Scrum, Leadership, Cross-Functional Team Leadership, Technical Mentoring, Product Delivery Coordination, System Design, Cloud-Native Architecture, Microservices, API Development, Node.js, PostgreSQL, GCP, Docker, Kubernetes, GitLab CI

Education

Telkom University | Bandung, West Java
Bachelor Informatics | 05/2021
